

ONLINE SHORT COURSE IN SKIN CANCER SCREENING

FREE OF
CHARGE

REGISTER AT WWW.SKINCANCERTRAINING.COM.AU

The course provides health practitioners with fundamental knowledge on how to screen patients and identify suspicious skin lesions in a clinical setting. The video lectures are based on HealthCert skin cancer certificate courses, quality-assured by Bond University and completed by over 8,500 medical professionals worldwide. Upon completion, further training is recommended.

COURSE CONTENTS

- **Part I: FULL-BODY SKIN EXAMINATION**
Learn how to provide a systematic, best-practice full-body skin cancer examination for patients.
- **Part II: SUSPICIOUS SKIN LESIONS**
Learn how to identify and manage suspicious skin lesions in the primary care setting.
- **Part III: DERMOSCOPY**
Learn how to use dermoscopy in assessing suspicious skin lesions and minimise the risk of missing an obvious melanoma.
- **Part IV: THREE POINT CHECKLIST**
Learn how to use the Three Point Checklist to assess lesions, including training images and case discussions.

PRESENTED BY

Professor David Wilkinson

MBChB MSc MD PhD DSc
MRCP FRACGP FACRRM FAFPHM

Professor Wilkinson is a general practitioner and public health medicine specialist. He has published research papers on skin cancer, designed and led the development of the only Master of Medicine degree in skin cancer, and helped develop a suite of skin cancer certificate courses for general practitioners.

Upon completion of the course,
test your diagnostic knowledge
in a 10-image lesion quiz.

PREPARE YOUR PRACTICE FOR SUMMER

With summer just around the corner, you are certain to see an increase in patients requesting a skin check. Skin cancer is the most common dermatological condition seen in Australian general practice – and it is not overly complex to manage if you have the right skill set. Due to a lack of dermatologists, general practitioners diagnose and treat 55-65 percent of all skin cancers and play a vital role in managing the skin cancer epidemic in Australia. To provide effective care to patients with skin cancer concerns and minimise referrals to hard-to-access specialists, all health practitioners are encouraged to acquire essential knowledge in skin cancer diagnosis and treatment.

There are over 1 million patient consultations per year for skin cancer in primary care.

An untrained GP will have a NNT of 30:1 for melanoma but with some training this can drop to 17:1.

With almost 14,000 melanoma and 900,000 non-melanoma cases each year, Australia has the world's highest skin cancer incidence.

Due to a lack of specialists, patients have limited access to timely diagnosis and treatment, especially in rural areas.

2 in 3 Australians will be diagnosed with skin cancer by the age of 70.

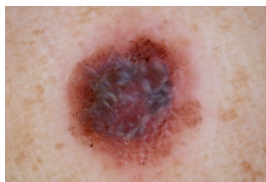

Over 2,000 Australians die from skin cancer each year. The mortality rate increases with age.

Data provided by Cancer Council Australia.

WHICH OF THESE IS A DEADLY MELANOMA?

Upon completion of the free short course, you will have the essential knowledge to differentiate between malignant and benign lesions.

1. Pigmented Nodular BCC 2. Nodular Melanoma 3. Skin tag

HOW TO GET FREE ACCESS TO THE COURSE

- Go to www.skincancertraining.com.au
- Register your name and email address
- Get instant access to the online course
- View the video lectures at your own pace
- Complete a 10-image diagnosis quiz
